

Empower Optimized Export Fact Sheet

Updated October 2026

EVMS forProject exports your **earned value data** directly to **Empower, from Encore Analytics**, in the Empower Optimized Format. Task-level schedule detail from Microsoft Project or Primavera P6 flows through EVMS forProject into the same package, and over 100 validations check it all on the way.

What goes to Empower

- Budgets, earned value, actuals and forecasts
- WBS, OBS and up to 12 more breakdown structures
- Any number of Units: map any direct or indirect Result Unit to an Empower Unit
- Elements of cost such as Labor, Material, Subcontract, Travel and ODC, mapped from your Result Units
- Custom fields
- Task-level schedule detail from Microsoft Project (including Project Server) or Primavera P6 EPPM

What this means for you

- Gets past the limits of IPMR XML, IPMDAR JSON and DOE PARS JSON: two structures, cost and schedule kept apart, fixed Units and elements of cost
- Cost and schedule data in one step and one package
- More ways to summarize, drill down and filter in Empower
- Works even for small projects with no formal EV requirement

How the export works

- Run the Empower export from EVMS forProject
- Over 100 validations check the data and report results right away, so you can fix issues before importing to Empower
- The output is a set of tab-delimited text files, zipped into one package in the Empower Optimized Format
- Choose Empower's watch folder as the destination if you like

About Empower

Empower, from Encore Analytics, is a browser-based tool for analyzing earned value, schedule and other project performance data. Contractors use it, and so do multiple government agencies: DoD/DoW agencies, NASA and DOE, to name a few.
