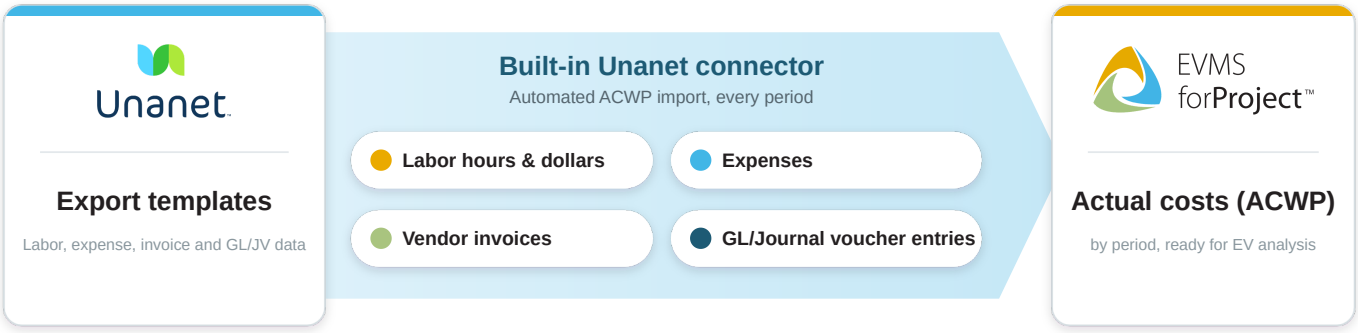
EVMS forProject™

Earned Value Management.
Simplified.

Unanet Integration Fact Sheet

EVMS forProject includes a **built-in Unanet connector** that brings your actual costs from Unanet into your earned value every period, without re-keying. Keep running your business in Unanet; let EVMS forProject handle the earned value.



Set up once with forProject support | **Typically, a few days** of configuration | **No custom development**

What comes in from Unanet

- Labor hours and dollars
- Expense dollars
- Vendor invoices
- GL/journal voucher entries
- Imported as actual costs (ACWP) by financial period, ready for variance analysis and EACs

What this means for you

- No re-keying of actuals, and fewer errors
- Actuals arrive the same way every period, so your EV reporting stays on schedule
- Configuration, not custom development, which means lower cost and less risk
- Works alongside the schedules you keep in Microsoft Project or Primavera P6

How setup works

- Your team configures export templates in Unanet
- You map the connector to the fields and codes your organization uses
- forProject consultants coach you through each step
- Typically, a few days of configuration, set up once
- Included with EVMS forProject; no custom development

About Unanet

Unanet provides ERP and CRM solutions purpose-built for government contractors, AEC and professional services firms. forProject Technology is a Unanet integration partner.
